Building Valuation Data

The valuation of building construction for building permit purposes shall be the actual total construction cost for the proposed project, including all classes of work. Section 108.3 of the Oregon Structural Specialty Code (OSSC) and the Oregon Residential Specialty Code (ORSC) require permit valuation to include the total value of the work for which a permit is being sought, such as architectural, structural, electrical, gas, mechanical, plumbing equipment and other permanent systems, including material and labor. The applicant for a permit shall provide an estimated permit value at the time of application. If, in the opinion of the Building Official, the valuation is underestimated on the application, the permit shall be denied unless the applicant can provide detailed cost estimates to meet the approval of the Building Official. Final building permit valuation shall be set by the Building Official.

The valuation tables below are square foot default tables for certain Occupancies and Type of Construction, provided as a courtesy for permit applicants and are to be used only as a beginning estimate of construction costs where accurate estimates of construction costs have not been determined prior to permit application. As stated previously, permit valuation shall be based on the actual cost of construction.
