 Re: Council Request - West 16th and Poplar Streets

This memo is in response to the Council request dated November 7, 2007 to study the feasibility of relocating the stop signs at West 16th and Poplar Streets to stop traffic on west 16th Street at Poplar Street rather than stopping Poplar Street.

The study included watching the intersection to determine if there were any problems, a count during the peak period and review of the crash data at the intersection. The results of the count indicated that more vehicles were traveling on West 16th Street and most traffic on Poplar was destined to/from the business north of the park. In the review of the crash data fro the past 3 years, it revealed that there was not an accident problem with only one accident in 2004. During our field investigation no unsafe vehicular maneuvers were made and pedestrians were seen safety crossing the street. The pedestrians had adequate gaps in traffic to cross safety to the other side of the street.

We have previously studied the intersection for a four-way stop. It did not meet the warrants for a 4-way stop. According to the Manual on Uniform Traffic Control Devices (MUTCD) stop signs are not to be used for speed control and should be installed in a manner that minimizes the number of vehicles having to stop. Therefore, I am recommending the stop signs not be relocated and remain on the minor approach which is Poplar.

Please contact me at extension 1379 if you have any questions.
