

Rain Garden Planted at Municipal Building

This newly installed rain garden is a green infrastructure project funded through a 319(h) Clean Water Act Grant from the NJ Department of Environmental Protection. Additional funding was provided by the NJ Agricultural experiment station, the Somerset County Board of Chosen Freeholders and the national fish and wildlife service.

A rain garden is functional landscaping designed to capture storm water and reduce flooding. They are also designed to improve water quality by acting as a filter for pollutants. Rain gardens are beautiful, low maintenance, and inexpensive gardens you can install at your home.
