

## **EXHIBIT G**

### **Maintenance of the Integrity of the Soil Cap**

Maintaining the integrity of the soil cap means that at any time the marker mat should become exposed, a minimum of twelve (12) inches of clean soil, equivalent to the specifications identified in Exhibit G-1 attached will be placed on top of the exposed area immediately upon discovery. The Operator shall maintain a written log of all locations of repaired exposed areas, as well as the time of discovery, length of time exposure and all action taken.
