Central Hudson will soon be working along the transmission line right-of-way or easement located on or adjoining your property. These transmission lines deliver high voltage, electricity into communities for use by you and your neighbors.

If you'll recall, the 2003 blackout which affected most of the northeastern U.S. was triggered when a tree, located within a transmission right-of-way, grew into contact with a 345kV transmission line, causing power interruptions in Ohio. That outage, in turn, cascaded through the northeast power grid, putting millions of people in the dark.

As an outcome of the investigation following that event, the Federal Energy Regulatory Commission issued many guidelines to prevent another, similar catastrophic occurrence. Acting upon those guidelines, the Public Service Commission of New York State has required by regulation that all electric utilities in New York State must maintain their easements and rights-of-way as follows:

1. Remove all non-compatible, tall growing tree species within the rights-of-way.
2. Identify and remove any hazardous or "danger" tree that could contact the transmission line.
3. Control tall growing vegetation on maintenance cycles to ensure rights-of-way integrity, through mowing, clearing, and utilization of E.P.A. registered general use herbicides.
4. Maintain rights-of-way to their full widths or limits.

Given our obligation to help ensure the public safety and to improve the reliability of vital electric service by maintaining the region's transmission system as mandated according to these regulations, we will be performing some or all of the four operations described above along Central Hudson's right-of-ways through or adjacent to your property during 2019.

If you have questions or concerns, please feel free to contact us at 845-452-2700. Thank you in advance for your patience and understanding.
